

Objective:- Building an expense tracker for Paytm app.

Team:- Product Team

Contributors:- Geetika

Version:- 0.0.1

Status:- MVP

Market Research:-

The Indian expense tracker app market is expanding significantly, fueled by increased digital payments and mobile adoption. With over 13 billion UPI transactions monthly, there is a growing need for automated financial management tools to track spending, categorize expenses, and offer insights in real-time.

- **Market Size:** Globally, expense tracking software is expected to grow from \$9.67 billion in 2024 to \$15.74 billion by 2028, with the Asia-Pacific region (including India) expected to see the fastest growth.
- **Key Drivers:** The shift toward digital transactions, demand for real-time financial tracking, and increased smartphone use drive this demand.

Leading Apps in India:

1. **Jupiter Money:** Known for its seamless UPI integration and advanced expense categorization, Jupiter allows users to link multiple accounts and manage finances, track spending, set budgets, and receive AI-powered financial insights to optimize spending
2. **FinArt:** This app focuses on SMS-based tracking, automatically categorizing expenses from various accounts (e.g., bank, wallet) and providing bill reminders. FinArt is popular for its privacy-focused approach and real-time financial snapshots
3. **Monefy** and **Spendee:** Provide simple budgeting tools with options for multiple account linking and visual summaries

Problem Validation:-

What is the true problem?- The shift to digital payments (UPI, wallet transactions) has reduced the need for manual tracking, but users lack centralized, automated tracking for managing and visualizing their spending effectively within the UPI apps and have to rely on third party apps for tracking the expenditure or do it manually.

Why is it urgent to solve this problem now?- It's important to solve this problem now because UPI is processing over 13 billion transactions monthly, creating a vast opportunity to add value to users within platforms like Paytm. By integrating expense tracking, Paytm can capitalize on this massive transaction volume, offering users a more comprehensive solution for managing their finances. This not only meets a growing demand for financial tools but also positions Paytm to stay competitive against rivals like Google Pay and PhonePe, who currently do not offer this feature. Acting now will help Paytm enhance user engagement, reduce churn, and drive new revenue streams before competitors catch up.

Competitive Analysis-

Major competitors- Google Pay, PhonePe, Walnut, MoneyView, FinArt etc.

Apps	Key Features	USPs	Expense Tracker
Google Pay	Category tracking, monthly spending summary (U.S.), UPI	Focus on UPI and bank account transactions, spending insights	Yes (U.S.)
PhonePe	Bills, UPI payments, insurance purchase	Unified payments and finance platform, instant money transfers	No
FinArt	SMS-based tracking, spending trends	Advanced categorization, privacy-focused	Yes
MoneyView	Budgeting tools, savings insights, loan access	Real-time alerts, multi-account view	Yes
Walnut	SMS-based expense tracking, bill reminders	Integration with bank SMS for auto-tracking, reminders for upcoming bills	Yes

Conclusion- Paytm can gain a competitive edge by offering a comprehensive expense tracker that integrates UPI, wallet, and bank transactions, filling a gap left by competitors

Target Users:-

Age- 25- 40 years old

City- Tier 1 and Tier 2

Employment type- Working professional/ self employed

Why this segment?

The target segment of 25-40-year-old working professionals and self-employed individuals in Tier 1 and Tier 2 cities is ideal due to their financial maturity, stable income, and familiarity with digital tools. This group seeks efficient solutions for managing expenses and has a fast-paced lifestyle, making an expense tracker valuable.

User Persona:-

Rhea Kapoor

Age: 32

Occupation: Marketing Manager at a Tech Firm

Location: Mumbai

Income: ₹12,00,000/year

Pain Points-

- Struggles to manage her personal expenses across multiple accounts (bank, UPI, and wallet).
- She often finds it difficult to understand where her money goes each month, making budgeting and saving harder.
- With her busy work schedule, she doesn't have the time to manually track her finances from different sources.

Needs-

- A solution that calculates expenses from multiple sources (bank accounts, UPI, and wallets).

- Real-time tracking of spending with automatic categorization of expenses to get a clear view of her financial health.
- Easy-to-understand insights and monthly summaries that help her plan her budget and save for future goals.

Solutions-

Solution 1 - Expense Tracker: A comprehensive tool that calculates all transactions from bank accounts, UPI, and wallets, providing real-time categorization and insights to help users manage their expenses easily.

Solution 2- Spending Limit Setter: A feature that allows users to set monthly or category-specific spending limits, sending alerts when they are nearing their budget to encourage better financial discipline.

Solution 3- AI Recommendations for Savings and Budgeting: AI-driven suggestions that analyze spending patterns and recommend personalized saving strategies, budget adjustments, or investment opportunities to help users meet their financial goals.

Prioritization:-

Solutions	Value Risk	Usability Risk	Feasibility Risk	Visibility Risk
S1	Low	Low	Medium	Low
S2	Medium	Medium	Low	Low
S3	High	Medium	High	High

Solution 1, i.e., Expense Tracker is prioritized.

Why S1?

The Expense Tracker is prioritized because it addresses the core need of managing finances across multiple platforms, providing high value with low usability and visibility risks. Its moderate feasibility risk is outweighed by its ability to engage users regularly, making it a crucial feature for driving user adoption and retention.

Key Feature of Expense Tracker-

1. **Automated Transaction Import:** Seamless integration with bank accounts, UPI, and wallet transactions for automatic expense tracking.

2. **Categorization of Expenses:** Automatically categorizes expenses into predefined categories (e.g., food, shopping).
3. **Spending Insights:** Provides visual summaries and analytics of spending patterns and monthly overviews.

User Flow:

Product Journey:

1. User-Friendly Interface:

- Simplified navigation to guide customers and make them find the Expense tracker feature.
- High visibility with simple UI to indicate the user what is being used and on what they spend.

2. Timely Filter (3 step filter):

- Weekly, Monthly and Yearly split to the users to distinguish their spending according to the months of calendar
- Real-time updates to the pie chart within seconds to display spending on their usage.

3. Document Download:

- Secured and easy download the viewed expense as excel so users can work on their spending on their own.

User Story

Title: Expense Tracker Feature Discovery

As a vivid Paytm user,
I want to easily discover the feature on the app,
So that I can quickly check and track my expenses.

Acceptance Criteria

- **Visibility and Access:** The Track Expense feature is prominently displayed on the homepage/burger icon/ history of payments with a clear call-to-action button labeled "Track Expense" leading directly to the expense tracker page

Title: Expense Tracker UI and filter conditions

As a vivid PayTM user,
I want to look and understand my expense easily with filters,
So that I can quickly check and track my expenses timely.

Acceptance Criteria

- **Visibility and Access:** Once the user clicks on the CTA of "Expense Tracker" the user should be able to view the expenses made and should update dynamically

within seconds once the payment is made. Need to have a timely filter of weekly, monthly and yearly expenses to show the spending of users.

Title: Expense Tracker Download as Excel

As a vivid PayTM user,
I want to download my made expenses as a format,
So that I can calculate and understand my spending with ease.

Acceptance Criteria

- **Visibility and Access:** The user should be given access with “Download as Excel”, once clicked should automatically download the file as excel for their usage for the selected time frame respectively.

Launch Readiness

Requirement gathering

- Setting the goal and vision
- Identifying the required list of stakeholders involved for the launch

Design Phase

- Gathering with the design team and explaining the idea
- Setting the expected timeline for POC
- ETA for full project till launch with expected deliverables

Dev phase

- Gathering with the dev team and explaining the idea
- Setting the expected timeline for POC post the design completion
- ETA for full project till launch with expected deliverables
- Understanding more on the priority and doables and setting right timeline
- More discussions on API and UI level sync and having a seamless and optimised connection throughout.
- Following up with handling exceptions and understanding more on the risks and mitigations

QA Phase

- Gathering with the QA team and explaining the idea
- Setting the expected timeline for POC
- Depth of testing is important by having the right testing phases like manual testing and automation testing wherever necessary

- A/B testing by understanding how the feature is being a unique one on its working
- ETA for full project till launch with expected deliverables

Launch Phase

- Gathering with the entire team and explaining the idea
- Setting the expected timeline for POC
- ETA for full project till launch with expected deliverables
- Launching it by understanding four main divisions of how well the product is positioned, who are my target audience, how well it solves the problem and is it the right time for the launch is it syncing with the trend
- Launching on all cities with Tier- 1 high focus and understanding the impact it has put and pushing it beyond

Key Milestones

Milestones	W1	W2	W3	W4	W5	W6	W7	W8	W9
Design									
Dev									
QA									
Marketing									
Launch									

GTM Strategy: A defined GTM plan which solves problems of customers via new features from PayTM, this can be done via soft launch mainly ensuring the core features.

Target Users: 30-45 users segments

Impact Estimation: 27L+ downloads and impact is 10% of it = 2.7L concurrent users

Market Positioning: India's first expense tracker feature in a UPI app as yet another USP.

Marketing Strategy to acquire new users:

Visibility of Product: Intuitive UI with awareness in the main landing page of UPI app.

Personalized Ads and campaigns run in social media and create awareness to users regarding the spending awareness

Customer Support: From Day to solve the customer queries immediately with right ETA to gain customer trust

Feedback Loops: Learning from the mistakes we have done and fixing/implementing solutions asap.

Metrics:-

PLC: Concentrating more on Intro stage (0-1) as we are entering the market for the very 1st time and aligning the metrics towards Intro stage and reaching the target of attaining product market fit.

North Star Metric: Avg time taken to display expenses (Within seconds) on each successful transaction.

Exposure: Via ads, Social media platforms

Adoption: No of new existing users downloading excel

Activation: Activate by updating each transaction

Referral: NPS score on people recommending others to use app which gives expense report real time

Satisfaction: CSAT score to determine how many people get benefited during process of displaying their spending on graph

Non Func Req: App loading time during each steps, App crash reports, Scalability of server(Vertical and Horizontal), API Response Codes (200,500 and 400)

Risks and Mitigations

Risk: Reduced Usage After Seeing High Expenditures

Users may feel discouraged by high spending insights, leading to reduced app usage due to negative emotions about their finances.

Mitigation: Provide positive reinforcement through personalized savings tips, budget-friendly suggestions, and progress tracking to keep users motivated and engaged.

Risk: Delayed or Missing Transaction Updates

Some transactions may fail to sync or update in real-time, leading to inaccurate tracking and frustrating the user experience.

Mitigation: Ensure robust and frequent syncing with payment systems, provide users with clear notifications of sync issues, and allow manual transaction input to prevent discrepancies.

Risk: Inaccurate Expense Categorization

The app may incorrectly categorize certain transactions, leading to confusion and frustration for users who rely on accurate tracking for budgeting and financial management.

Mitigation: Allow users to manually adjust categories and refine automatic categorization. Use machine learning to improve categorization accuracy over time based on user behavior and feedback.

Future Iterations:-

1. **Cash Payment Integration-** Allow users to manually enter cash transactions and sync them with the app, providing a complete view of their financial activity, including both digital and cash-based payments.
2. **Custom Categories and Tags:** Allow users to create personalized categories or tags for more specific tracking, providing more flexibility in how they manage their expenses.
3. **Receipt Scanning Integration:** Allow users to scan and upload receipts for purchases made in-store or online, automatically categorizing and logging the transaction for easier tracking.
